

VeyFo® E-Selenium-Mulgat

VeyFo® E-Selenium-Mulgat namijenjen je farmskim životinjama i kućnim ljubimcima. U proizvodu se nalazi vitamin E (tokoferol) i selenij koji su organski vezani u spoj „selenometionin“ koji se koristi zbog vrlo dobre biodostupnosti i kompatibilnosti. Posebno je važan pri kontroli mišićnog metabolizma i u regulaciji, razvoju i radu gonada. Vitamin E i selen su antioksidansi koji štite stanice. Hranidbeni deficiti povećavaju incidenciju pojave bolesti vimena, povišenog broja somatskih stanica u mlijeku, degenerativnih simptoma i problema s plodnošću.

Oprema:

500 ml boca

Doziranje i način primjene:

- Za smanjenje stres kod praščića starosti 1-7 dana
- Kao dodatak tijekom preliminarne faze estrusa, tijekom zadnja 2 tjedna graviditeta i do sljedeće potvrđene gravidnosti u krava
- Kod rasplodnih krmača koristi se 7 dana prije osjemenjivanja i 3 dana nakon osjemenjivanja, te 7 dana prije poroda i 3 dana nakon poroda.
- Kod ženki drugih sisavaca koristi se tijekom zadnje faze graviditeta do sljedeće potvrđene gravidnosti
- Kod ptica (pr.golubova) koristi se tijekom faze nesenja
- Kod muških životinja koristi se kod reproduktivnih aktivnosti

Prije upotrebe proizvoda preporučljivo se posavjetovati sa veterinarom.

Breeding Sows:

General feed supplement 10 ml daily for 1 – 2 days

During special performance phases such as

at the time of farrowing 5 ml for 1 – 3 days

on the day of weaning off the piglets 10 ml

on day 1 after mating 5 ml

on day 10 after mating 5 ml

Piglets:

General feed supplementation 2 ml daily for 1 – 2 days

In case of increased stress like

immediately after birth 1 ml

during weaning 1 ml daily for 1 – 3 days

Cows:

General feed supplementation 20 ml daily for 1 – 2 days

During special performance phases such as

during the first 100 days of lactation 3 ml daily resp. 2 x 10 ml per week

prior to insemination 20 ml as well as daily 10 ml for the following 5 days

Calves:

General feed supplementation	5 ml daily for 1 – 2 days
In case of increased stress like immediately after birth	8 ml
during worming	3 ml daily for 1 – 3 days
As permanent supplementation	1 ml daily resp. 5 ml per week

Mares:

General feed supplementation	20 ml daily for 1 – 2 days
During special performance phases such as during oestrus	3 ml daily resp. 2 x 10 ml per week

Breeding stallions:

General feed supplementation	20 ml daily for 1 – 2 days
During special performance phases i.e. during mating season	3 ml daily resp. 2 x 10 ml per week

Foals:

General feed supplementation	5 ml daily for 1 – 2 days
In case of increased stress like immediately after birth	8 ml
during worming	2 ml daily for 1 – 3 days
As permanent supplementation	1 – 2 ml daily resp. 5 ml 1 x per week

Sheep, goats:

General feed supplementation	5 ml daily for 1 – 2 days
During special performance phases such as prior to insemination as well as for the following 5 days	4 ml daily

Lambs and goat kids:

General feed supplementation	1 ml daily for 1 – 2 days
In case of increased stress like immediately after birth	1 ml

Dogs:

0.5 – 1 ml

Napomena:

Preporučljivo se pridržavati preporučenih doza kako bi se izbjeglo prekomjerno davanje aditiva i suplemenata u gotovoj hrani.

Ovaj proizvod sadrži više selena te se u gotove hrane smije dodavati u omjeru 1.0g/kg =1000 g/tonu.
